

ReseaChem GmbH, together with three sister companies – **Swant AG** (antibodies for CNS research, Switzerland), **Tenax AG** (products for the adsorption of volatile organic compounds) and **Buchem BV** (production of specialty chemicals and medical devices, the Netherlands) – forms the international **Research and Medical Chemicals Group (RMC)**, which is continuously expanding.

ReseaChem GmbH offers a broad range of services in the areas of custom organic synthesis, natural product isolation and various analytical services at its site in the Olten region. Our comprehensive HPLC, LC-MS, GC-MS and NMR analytical services have been valued by our customers for more than 25 years.

ReseaChem GmbH has a long-standing collaboration with the **Drug Information Center Zurich (DIZ)**, whose drug checking service is an important part of our work. ReseaChem GmbH qualitatively and quantitatively analyses psychoactive substances from street samples using chromatographic methods.

To strengthen our analytical team in the Olten region, we are looking for, as soon as possible or by mutual agreement, a

Chemical laboratory technician (m/f/d)

Specialisation in analytical chemistry | 60–100%

Your responsibilities

- Conducting, evaluating and documenting substance analyses using HPLC, LC-MS and GC-MS
- Responsibility for communication with the social workers of the DIZ, including the timely communication of analytical results and professional advice in response to queries
- Assisting with the maintenance and upkeep of analytical equipment as well as general laboratory work
- Conducting NMR analyses (1D-NMR, quantitative NMR) of customer samples and substances from in-house production
- Organising logistics and coordinating resources
- Assisting with order processing, in particular quality assurance, product packaging, preparation of delivery notes and shipping

Optional additional work in Zurich

- Conducting and evaluating substance analyses using HPLC on site, particularly on Saturday evenings
- Coordinating and organising analytical work in Zurich, as well as providing professional support and training for employees

Your profile

- Graduated as a laboratory technician specialising in chemistry or an equivalent qualification
- Solid practical experience in HPLC analysis
- Additional experience in instrumental analysis, particularly LC-MS, GC-MS and NMR, is an advantage
- Team-oriented, flexible and independent personality who enjoys working in a small team
- Reliable, precise, structured and punctual way of working
- Communicative and resilient personality
- Quick comprehension, high initiative and motivation
- Very good German skills, both written and spoken, proficient in the English language
- A valid work permit for Switzerland
- Residence in Switzerland or willingness to commute across the border within a reasonable distance
- Experience and an interest in the analysis of controlled substances and/or pharmaceuticals are an advantage

What we offer

- An interesting and varied position in a dynamic working environment
- Good employment conditions and social benefits
- Flexible working hours
- A varied and professionally challenging role offering insights into modern analytical methods and drug checking
